Education

Amrita Vishwa Vidyapeetham

Bachelor of Technology in Computer Science and Engineering

Kerala, India
Aug 2021 – Aug 2025

Technical Skills

Languages: Python, Go, Java, SQL

Backend Engineering: FastAPI, Flask, REST APIs, Microservices, Distributed Systems

Cloud & Infrastructure: AWS, Docker, Kubernetes, CI/CD, Linux

Databases: PostgreSQL, Neo4j, Vector Databases

AI Infrastructure: LLMs, RAG, Agentic AI, Embeddings, Semantic Search

Developer Tools: Git, GitHub Actions, Bash

Experience

GameGround

Founding Engineer

Remote
Sep 2025 – Present

- Architected and developed the core backend platform for a sports marketplace connecting athletes and coaches, supporting 500+ active users and 19+ onboarded coaches.
- Designed and implemented scalable REST APIs using FastAPI and PostgreSQL powering bookings, coach discovery, onboarding workflows, and user lifecycle management.
- Owned backend architecture, database design, indexing strategy, and data modeling decisions to ensure maintainability and operational reliability.
- Implemented authentication, authorization, and role-based access controls across athlete, coach, and administrator workflows.
- Built and maintained AWS-based infrastructure, deployment pipelines, and production environments enabling rapid feature delivery.
- Collaborated closely with product, operations, and business teams to deliver end-to-end platform functionality from concept to production.

Google

Software Engineering Intern – Search Ranking

Bangalore, India
Feb 2025 – Jul 2025

- Developed feature engineering workflows supporting search ranking experiments using user-behavior and interaction signals.
- Built internal tooling to automate dataset preparation, validation, and ranking evaluation workflows used by engineering teams.
- Analyzed large-scale search datasets to investigate ranking signal effectiveness and support data-driven experimentation.
- Collaborated with engineers and researchers to evaluate ranking quality metrics and identify opportunities for search relevance improvements.
- Worked with distributed data processing systems and production-scale datasets within Google's search infrastructure.

Sproutheads

Python Automation Developer

Remote
Jul 2024 – Jul 2025

- Developed Python automation systems integrating external APIs and business applications to streamline operational workflows.
- Built ETL pipelines for ingestion, transformation, validation, and reporting of business-critical data.
- Designed internal tools for workflow orchestration, operational analytics, and process monitoring across teams.
- Automated repetitive business processes, reducing manual effort and improving execution consistency.
- Translated stakeholder requirements into scalable automation solutions deployed across multiple business functions.

Projects

AI Coding Agent

Python, Neo4j, LLMs, Vector Search

- Developed an autonomous repository intelligence agent capable of repository-wide reasoning across codebases exceeding 100K+ lines of code.
- Built a Neo4j-backed knowledge graph modeling dependencies, imports, files, and functions to improve contextual understanding.
- Implemented retrieval-augmented reasoning pipelines for bug localization, pull request analysis, repository exploration, and code understanding.

Distributed Kafka Clone

Go

- Designed and implemented a distributed event streaming platform supporting partitioned logs, replication, and persistent message storage.
- Built consumer group coordination, offset management, and leader-based replication mechanisms for fault-tolerant message processing.
- Implemented partition assignment and recovery workflows inspired by Apache Kafka's distributed architecture.

Enterprise Semantic Search Platform

Python, FastAPI, RAG

- Built a semantic retrieval platform leveraging embeddings, vector search, and Retrieval-Augmented Generation (RAG) for enterprise knowledge discovery.
- Designed scalable indexing and retrieval pipelines supporting efficient document ingestion and semantic search.
- Optimized retrieval performance through embedding caching, asynchronous processing, and vector similarity search strategies.
